

## PROJECT STATUS REPORT

**Project Name** Bob The Builder

**For Week Ending** 8th March 2024

**Project Status** Yellow

**Status Description** It's yellow as we ran into some troubles while moving our project from local to AWS lightsail. We were able to design our home page and signup page. Our status would have been green if we could make our community page and member profile page with buddy press, and complete the functionality of signup and have a login page.

### Activities—During the Past Week

**Bhargav Taraviya** - Designed and implemented the Home page and Contact us page in our website. Helped in moving the platform from local to AWS lightsail.

**Muhammad Israr Khan** - Work in progress - to design and implement the community page in our website.

**Nihal Sekhar** - Work in progress - to design and implement the build a network page in our website. Helped in moving the platform from local to AWS lightsail.

**Poojan Patel** - Helped in designing the Home page and Contact us page in our website. Designed and implemented the Sign Up page on our website.

### Activities—Planned for Next Week

**Bhargav Taraviya** - Start with the design of the Member Profile page and find ways to improve UX.

**Muhammad Israr Khan** - Finish the design and implement the community page in our website.

**Nihal Sekhar** - Finish the design and implement the build a network page in our website and find ways to integrate pages in WordPress.

**Poojan Patel** - Find ways to improve UX in the sign up and sign in page, help in designing and member profile page and login functionality.

### Project Issues

1. Few of the features like Alignment and Forms which were there in the Local - WordPress were not working in the AWS Lightsail - WordPress instance. Reason was pretty unclear but we solved it by redoing the work from scratch.

## Project Changes

---

1. Moved the platform from locally in local to a WordPress Instance in AWS Lightsail.
